ABSTRACT:

A system and method of automatically formulating an alpha-numeric comprehensive

management and prognosis report at a centralized data management center for a patient at a remote location is defined comprising: means for converting information regarding the condition of the patient into data; a first telecommunications means for transferring data to the centralized data management center; and processing means at the centralized data management center for receiving the data and for generating the comprehensive management and prognosis report based on analysis of the data. A storage means is also provided at the centralized data management center for maintaining a record of the data received by and transmitted from the centralized data management center in a relational data base format.
